

1. Daily Application Breakdown (2026-08-31) - Total: 122.5 mins

Application / Tool	Duration (Minutes)
ApplicationFrameHost.exe	72.9 min
chrome.exe	44.7 min
explorer.exe	3.1 min
notepad.exe	1.0 min
cmd.exe	0.7 min
unknown	0.0 min
SearchUI.exe	0.0 min

2. AI Coaching, Anomaly Detection & Longitudinal Analysis

SECTION 1: DAILY DEEP DIVE (2026-08-31)

1. Today Core Accomplishments & Tasks
 - Completed a concentrated 64.2-minute study session focused on Chapter 7 9th Grade Mathematics via PDF viewer.
 - Invested 18.8 minutes into creating a structured study planner in Chrome, supplemented by quick organizational updates in Notepad and tracking tools.
 - Conducted brief reviews of additional academic materials, including Pakistan Studies (5.2 minutes) and Chemistry (2.7 minutes).
2. Today Distractions, Context Switching & Anomalies
 - Consumed a 14.1-minute non-academic YouTube video on Japan's history, accounting for over 11 percent of total active screen time.
 - Low total active volume for the day, logging only 2.04 hours of computer activity.
 - Minor friction from tab management, with small fragments of time split between ChatGPT, new tabs, and single-page PDF checks.
3. Today Focus Score (/10) with one-sentence justification

Score: 7.5/10

Justification: You maintained high task alignment by directing nearly 70 percent of your active time toward math study and planning, though a 14-minute YouTube detour reduced efficiency in a relatively brief overall session.
4. Actionable Improvements for Tomorrow
 - Use a browser extension to block media platforms like YouTube during dedicated study windows.
 - Increase total active output by scheduling at least two distinct 50-minute deep work blocks across the day.
 - Open all target study PDFs in a single reading workspace before starting the timer to avoid tab searching.

SECTION 2: ALL-TIME MACRO TRENDS

1. Cumulative Habit Summary
 - Across 31 logged days totaling 80.2 hours, your workflow is heavily dominated by document reading via ApplicationFrameHost (38.5 hours / 48 percent) and web-based tasks via Chrome (22.6 hours / 28 percent).
 - System overhead and lock states represent a high percentage of total recorded time, with Explorer (9.0 hours) and LockApp (5.9 hours) combined taking up roughly 18 percent of all computer time.
 - Average daily usage sits at approximately 2.6 hours, indicating short, targeted sessions rather than extended workdays.
2. Strategic Workflow Recommendation
 - Structure your computer time around clear session boundaries to eliminate idle desktop overhead and reduce high LockApp/Explorer ratios.
 - Set a goal to gradually scale active focused volume from 2.5 hours to 4.0 hours per day by pairing study PDFs directly with structured planning templates.
 - Establish a strict separation between research/study tools and entertainment channels on your primary browser profile.
